

Dataset Documentation

competencies · roles · igot_courses · nssta_tpac_programmes — SIH 2026, PS101 (MoSPI)

Overview

This document describes the four datasets used by Feature 1 (competency assessment & skill-gap engine) and Feature 2 (AI document-to-quiz engine). Each dataset carries a **source/source_url** field per record, pointing to the MoSPI, NSSTA, or iGOT document or page it was drawn from.

These are seed/reference datasets curated for the hackathon build, not a live feed. iGOT Karmayogi has no public bulk API, and NSSTA publishes its schedule as an annual PDF calendar rather than structured data - both are noted as limitations in Section 6 rather than worked around with fabricated data.

File	Rows	Columns	Primary source
competencies.csv	44	7	MoSPI/NSSTA training documents; iGOT user manual
roles.csv	28	7	MoSPI (mospi.gov.in) and NSSTA (nssta.gov.in)
igot_courses.csv	60	7	iGOT Karmayogi National Learning Week (NLW) 2024 course list
nssta_tpac_programmes.csv	50	9	MoSPI's NSSTA Advance Training Calendar FY 2025-26

1. competencies.csv

44 statistical, technical, and behavioural competencies relevant to the Official Statistical System, each classified by competency_type and grouped into a subject area. This is the reference list Feature 1 scores officers against, and the allowed competency-tag vocabulary Feature 2 gives the LLM when tagging generated quiz questions.

Schema

Field	Type	Description
competency_id	text (PK)	Unique code, e.g. COMP_001
competency_name	text	Human-readable competency name
competency_type	text	Domain, Functional, or Behavioural
area	text	Subject-area grouping (e.g. Data Analytics, Official Statistics)
description	text	What the competency covers
source	text	Short label for the issuing body (MoSPI, NSSTA, iGOT, or MoSPI/NSSTA jointly)
source_url	text (URL)	Link to the specific document/page

Composition

competency_type	Count
Functional	26
Domain	10
Behavioural	8

source	Count
MoSPI/NSSTA	33
NSSTA	6
iGOT	4
MoSPI	1

Sample record

Field	Value
competency_id	COMP_009
competency_name	Artificial Intelligence and Machine Learning
competency_type	Functional
area	Emerging Technologies
description	Understanding and application of AI and machine learning in official statistics.
source	MoSPI/NSSTA
source_url	mospi.gov.in — Circular_NSSTA_Advance_Training_Calander_FY(25-26).pdf

Note: area is a free-text field, not a fixed enum - 24 distinct area values appear across the 44 rows, several represented only once (e.g. Policy, Leadership, Emerging Technologies). Consider consolidating near-duplicate areas (Data Analytics / Data Analysis, Statistical Computing / Computing) if you need clean groupings for a dashboard.

2. roles.csv

28 roles spanning the Subordinate Statistical Service (SSS), the Indian Statistical Service (ISS) across its full seniority ladder from Probationer to Higher Administrative Grade Plus, and the State/UT Statistical System. Feature 1 uses this to set role-specific competency targets for gap analysis.

Schema

Field	Type	Description
role_id	text (PK)	Unique code, e.g. ROLE_001
role_name	text	Official designation
service	text	SSS, ISS, or State/UT Statistical System
role_category	text	Statistical, Statistical/Management, Senior Management, Entry/Training, or Training
department	text	Owning department (MoSPI, State/UT Government, etc.)
source	text	Short label for the issuing body
source_url	text (URL)	Link to the specific document/page

Composition

service	Count
Indian Statistical Service (ISS)	18
Subordinate Statistical Service (SSS)	5
State/UT Statistical System	5

role_category	Count
Statistical	11
Statistical/Management	8
Senior Management	6
Entry/Training	2
Training	1

Sample record

Field	Value
role_id	ROLE_019
role_name	ISS Officer - Junior Time Scale
service	Indian Statistical Service (ISS)
role_category	Statistical/Management
department	MoSPI
source	MoSPI
source_url	https://www.mospi.gov.in/

ISS seniority ladder captured end-to-end: ISS Probationer -> Junior Time Scale -> Senior Time Scale -> Junior Administrative Grade -> Senior Administrative Grade -> Higher Administrative Grade -> Higher Administrative Grade Plus, plus named leadership posts (Director, Joint Director, Deputy Director General, Additional Director General). Most source_url values point to MoSPI's homepage rather than a role-specific page - if a more precise citation exists per grade (e.g. the ISS Cadre Deployment Policy PDF), consider tightening those links.

3. igot_courses.csv

60 real iGOT Karmayogi course entries with working portal URLs, drawn from the platform's National Learning Week (NLW) 2024 course list. Each course is tagged with a `recommendation_category` describing which officer band it targets. Feature 1's recommendation engine uses this as the source for its "Learn now" (self-paced) track.

Schema

Field	Type	Description
course_id	text (PK)	Unique code, e.g. IGOT_001
course_name	text	Course title as published
duration	text	Course duration as published (free text, e.g. '2 hr 7 min')
provider	text	Content creator/provider organisation
course_url	text (URL)	Direct link to the course overview page
recommendation_category	text	Target officer band (e.g. Functional - JS & Above, Senior Scientists, MTS, All)
source	text	iGOT NLW 2024 (National Learning Week course list)

Composition

recommendation_category	Count
Functional - JS & Above	18
Behavioral - JS & Above	17
Senior Scientists	10
Behavioral - Director/DS	5
All	5
Behavioral - ASO to US	2
MTS	2
Functional - Director/DS	1

32 distinct course providers appear across the 60 rows.

Sample record

Field	Value
course_id	IGOT_004
course_name	Gen AI for Everyone
duration	2 hrs 49 mins
provider	Fractal
course_url	portal.igotkarmayogi.gov.in/app/toc/do_114085334432260096152

Field	Value
recommendation_category	Functional - JS & Above
source	iGOT NLW 2024

Important gaps: (1) none of the 60 courses are statistics-domain-specific - all are general administrative/behavioural/technology courses (AI awareness, communication, gender sensitization, cyber security, etc.), consistent with earlier research findings that MoSPI/statistics-specific iGOT content is not publicly listed. (2) IGOT_044 and IGOT_060 are duplicate entries (identical course_url, do_1140987239246069761105) - deduplicate before loading into Supabase or add a UNIQUE constraint on course_url. (3) No competency_tag column exists yet in this file, unlike the earlier seed version - you'll need to add one (or a mapping table) before Feature 1's recommendation engine can join courses to competencies.

4. nssta_tpac_programmes.csv

50 real training-programme entries extracted from MoSPI's official NSSTA Advance Training Calendar for FY 2025-26. Feature 1's recommendation engine uses this as the source for its "Apply for this programme" (in-person/residential) track.

Schema

Field	Type	Description
programme_id	text (PK)	Unique code, e.g. TPAC_001
programme_name	text	Programme/batch category as published (e.g. ISS Probationary Training, SSS Online Workshop)
training_area	text	Subject matter covered
duration_days	numeric	Length in days (0.5 for half-day workshops, 1 for one-day events)
participants	text	Who the programme is for
batch_size	text	Published batch size (may be a range for large webinars, e.g. 200-1000)
venue_or_institute	text	Delivery venue or partner institute
financial_year	text	2025-26 for every row in this file
source_url	text (URL)	The official MoSPI calendar PDF

Composition (top programme_name categories)

programme_name	Count
ISS Probationary Training	24
SSS Online Workshop	9
SSS In-Service Training	5
DSTP	3
DES Training Programme	2
UN SIAP / UN SIAP Workshop	3
MCTP Phase 1/2 Stage I	2
NSSTA Workshop	1
SSS Induction Training	1

Sample record

Field	Value
programme_id	TPAC_026
programme_name	DES Training Programme
training_area	Sampling Techniques and Large Scale Sample Surveys
duration_days	5

Field	Value
participants	DES Officers
batch_size	30
venue_or_institute	NSSTA
financial_year	2025-26
source_url	mospi.gov.in — Circular_NSSTA_Advance_Training_Calander_FY(25-26).pdf

Minor data-quality note: three rows (TPAC_048, TPAC_049, TPAC_050) have a source_url with the URL-encoded parenthesis characters malformed (FY2825-26%29 instead of FY%2825-26%29) - worth fixing so the links resolve correctly. No training_area column links back to competencies.csv by ID; matching is by free-text similarity only, same as the earlier seed version.

5. How the datasets relate to each other

None of these four files currently have formal foreign keys to each other - all four were researched and built independently, each sourced from its own official documents. To power Feature 1's recommendation engine (officer role -> required competencies -> measured gap -> matching course/programme), your team will need to add the joins below.

From	To	How to join today	Recommended fix
roles.csv	competencies.csv	No link exists	Add a role_competency_map table (role_id, competency_id, required_level)
competencies.csv	igot_courses.csv	No link exists (no competency_tag column in igot_courses.csv)	Add a competency_tag column to igot_courses.csv, or a mapping table
competencies.csv	nssta_tpac_programmes.csv	Free-text similarity only (competency_name vs. training_area)	Add a competency_id column to nssta_tpac_programmes.csv once topics are mapped

6. Known limitations

- No public iGOT API exists - igot_courses.csv was hand-curated from a published NLW 2024 course-list document, not pulled from a live catalog feed.
- igot_courses.csv contains one duplicate row (IGOT_044 / IGOT_060, same course_url) - deduplicate before import.
- igot_courses.csv has no competency_tag field yet, so it cannot currently be joined to competencies.csv without adding that column or a separate mapping table.
- No iGOT course in this dataset is statistics-domain-specific - all 60 are general administrative, behavioural, or technology courses. This matches the earlier finding that MoSPI/statistics-specific iGOT content isn't publicly listed anywhere found.
- nssta_tpac_programmes.csv reflects one fiscal year (2025-26) only - refresh when MoSPI publishes the next year's calendar. Three rows have a malformed source_url (see Section 4).
- roles.csv source_url mostly points to MoSPI's homepage rather than a role-specific document; tighten these citations if a more precise source is found for each grade.
- competencies.csv's area field is free text with 24 distinct values, several used only once - consider consolidating for cleaner reporting/dashboards.
